Hiring Manager & Engineering Leadership
Joulent

RE: Application for Founding ML Platform Engineer, Energy Intelligence Role

Dear Hiring Team at Joulent,

I am excited to apply for the Founding ML Platform Engineer role at Joulent. My experience in Python, CI/CD automation, performance optimization (83% latency reduction), and cloud migrations (Azure) aligns well with building robust 'trust infrastructure' for your energy intelligence platform.

Key technical achievements and relevant qualifications from my experience include:

- **CI/CD Security Automation:** Cut manual vulnerability triage time by **60%** by integrating Google Gemini API + Trivy and OWASP ZAP scanners directly into automated pipelines.
- **Backend Performance & Latency:** Reduced API response latency by **83%** through MongoDB aggregation pipeline optimization and multi-tier Redis caching.
- **Cloud & Container Orchestration:** Successfully migrated 38+ CI/CD workflows to GitLab CI/CD and migrated containerized microservices to Azure Container Apps and AWS.

I would welcome the opportunity to discuss how my technical expertise in cloud infrastructure, backend systems, and security automation can support Joulent's upcoming milestones. Thank you for your time and consideration.

Sincerely,

Ghaith Oueslati

DevSecOps & Backend Engineer
