Hiring Manager & Engineering Leadership Playbook

RE: Application for Senior iOS Engineer Role

Dear Hiring Team at Playbook,

I am excited to apply for the Senior iOS Engineer position at Playbook. My strong background in CI/CD, GitHub Actions, and performance optimization, though primarily in DevSecOps and Backend, aligns with your technical needs, and I am eager to transition my skills to mobile development.

Key technical achievements and relevant qualifications from my experience include:

- **CI/CD Security Automation:** Cut manual vulnerability triage time by **60%** by integrating Google Gemini API + Trivy and OWASP ZAP scanners directly into automated pipelines.
- **Backend Performance & Latency:** Reduced API response latency by **83%** through MongoDB aggregation pipeline optimization and multi-tier Redis caching.
- **Cloud & Container Orchestration:** Successfully migrated 38+ CI/CD workflows to GitLab CI/CD and migrated containerized microservices to Azure Container Apps and AWS.

I would welcome the opportunity to discuss how my technical expertise in cloud infrastructure, backend systems, and security automation can support Playbook's upcoming milestones. Thank you for your time and consideration.

Sincerely,

Ghaith Oueslati

DevSecOps & Backend Engineer
