**Hiring Manager & Engineering Leadership
Stellar Science**

RE: Application for Hybrid (USA) Albuquerque NM, Washington DC (Tysons VA), Dayton OH Role

Dear Hiring Team at Stellar Science,

I am excited to apply for the Associate / Mid-Level position at Stellar Science. My background in Python, Linux, DevSecOps, and backend performance optimization, including reducing security triage time by 60% and API latency by 83%, aligns perfectly with your innovative scientific software development.

Key technical achievements and relevant qualifications from my experience include:

- **CI/CD Security Automation:** Cut manual vulnerability triage time by **60%** by integrating Google Gemini API + Trivy and OWASP ZAP scanners directly into automated pipelines.
- **Backend Performance & Latency:** Reduced API response latency by **83%** through MongoDB aggregation pipeline optimization and multi-tier Redis caching.
- **Cloud & Container Orchestration:** Successfully migrated 38+ CI/CD workflows to GitLab CI/CD and migrated containerized microservices to Azure Container Apps and AWS.

I would welcome the opportunity to discuss how my technical expertise in cloud infrastructure, backend systems, and security automation can support Stellar Science's upcoming milestones. Thank you for your time and consideration.

Sincerely,

Ghaith Oueslati

DevSecOps & Backend Engineer
