Portfolio

Summary

Backend-leaning **full-stack engineer** graduating from ESPRIT in 2026, with hands-on internship experience shipping **DevSecOps automation**, **CI/CD pipelines**, and **AI-integrated backend services** in production environments. Built and shipped an AI test-generation agent (5,200+ lines) and cut security triage time 60% at SeekMake. Comfortable across the stack (NestJS, Spring Boot, React, Flutter) but strongest in backend systems and cloud infrastructure.

Education

Esprit

B.Eng. in Computer Engineering (TWIN: Web & Internet Technologies)

Sep 2021 – Jun 2026

Ariana, Tunisia

- Relevant coursework: Data Structures, Algorithms, Machine Learning, Cloud Computing, and Distributed Systems.

Technical Skills

Languages: JavaScript, TypeScript, Python, Java, C#, C++, C, PL/SQL, SQL

Frameworks: React, Angular, Node.js, NestJS, Spring Boot, .NET, Flutter, Django, Laravel, Symfony

Databases: MySQL, MongoDB

DevOps & Cloud: Docker, Terraform, GitHub Actions, GitLab CI/CD, AWS (EC2, Lambda, Secrets Manager), Azure (Container Apps, Front Door, ACR), GCP (Cloud Run, GAR)

Testing & Quality: Unit Testing, SonarQube, Code Review

Tools: Jenkins, Git, Swagger, Postman, Grafana, Figma, Trivy, OWASP ZAP

Concepts: REST APIs, Microservices, CI/CD Automation, DevSecOps, Agile/Scrum, Blue/Green Deployments, Infrastructure as Code, JWT, Keycloak, MQTT

Experience

SeekMake

Jan 2026 – Present

DevSecOps & Backend Engineer

Tunisia

- Cut manual security triage time by **60%** by integrating the Google Gemini API into the CI/CD pipeline to classify OWASP ZAP and Trivy scan findings and auto-generate fix suggestions.
- Reduced backend API response latency by **83%** by optimizing MongoDB aggregation pipelines and implementing caching for high-traffic endpoints.
- Built an AI-powered test generation agent (**5,200+ lines**) using Vertex AI, lifting unit test coverage to **75%+** through self-healing validation loops triggered on every pull request.
- Contributed to migrating **38+ CI/CD workflows** from GitHub Actions to GitLab CI/CD, converting workflow syntax and configuring self-hosted runners, cutting pipeline setup time by **45%**.
- Partnered with the senior DevOps team to migrate **8 of 12** microservices from GCP Cloud Run to Azure Container Apps, authoring deployment manifests and configuring Azure Front Door for production routing.
- Participated in Agile sprint ceremonies and peer code reviews across a team of **6** engineers, maintaining an **88%** first-submission pull request approval rate.

Cube IT

Jun 2025 – Present

Mobile Developer Intern

Tunisia

- Improved travel time estimation accuracy by **15%** by integrating mapping APIs and refining routing logic in a cross-platform Flutter transport app.
- Built and unit-tested core booking and payment-gateway features in Flutter and Spring Boot, collaborating via Git-based code review across **6** sprints.

Barmej Tech

Jun 2024 – Aug 2024

Fullstack Developer Intern

Tunisia

- Boosted backend performance by **30%** by optimizing SQL queries and implementing caching on core HR API endpoints.
- Delivered HR leave-tracking and reporting features end-to-end using REST APIs secured with JWT authentication.

Key Projects

- AI-Enhanced DevSecOps Pipeline | NestJS, GitHub Actions, Vertex AI, Terraform

Jan 2026 – Present

– Engineered a security automation pipeline combining OWASP ZAP (DAST), Trivy (SCA), and Gemini-based false-positive filtering, reducing triage effort by **60%** across **9 microservices**.
- Self-Hosted CI/CD Runner Infrastructure | AWS, Terraform, Lambda, EC2

2026

– Designed a serverless orchestrator using AWS Lambda and GitHub webhooks to provision self-terminating ephemeral EC2 runners, cutting runner idle costs by **35%**.
- RecruitPro | MERN, Machine Learning

Jan 2025 – May 2025

– Built an AI-based recruitment platform improving job-candidate matching accuracy by **25%** and cutting hiring time by **20%** via integrated analytics dashboards.

Additional Projects: Cloud Migration (GCP → Azure) • Bambu Lab 3D Printer Integration • EcoEvents • AI-Powered Journal App • University Management Platform • Equestrian Center App — full details on GitHub
