Hiring Manager & Engineering Leadership
CloudBase Amsterdam

RE: Application for Backend Engineer (Node.js / NestJS) Role

Dear Hiring Team at CloudBase Amsterdam,

I am excited to apply for the Backend Engineer position at CloudBase Amsterdam. My background developing scalable NestJS microservices and optimizing MongoDB/Redis caching will allow me to deliver immediate value to your backend platform.

Key technical achievements and relevant qualifications from my experience include:

- **CI/CD Security Automation:** Cut manual vulnerability triage time by **60%** by integrating Google Gemini API + Trivy and OWASP ZAP scanners directly into automated pipelines.
- **Backend Performance & Latency:** Reduced API response latency by **83%** through MongoDB aggregation pipeline optimization and multi-tier Redis caching.
- **Cloud & Container Orchestration:** Successfully migrated 38+ CI/CD workflows to GitLab CI/CD and migrated containerized microservices to Azure Container Apps and AWS.

I would welcome the opportunity to discuss how my technical expertise in cloud infrastructure, backend systems, and security automation can support CloudBase Amsterdam's upcoming milestones. Thank you for your time and consideration.

Sincerely,

Ghaith Oueslati

DevSecOps & Backend Engineer
